

Alberta Provincial Electoral Divisions

Summary Tables

Compiled from the 2011 Census of Canada and
National Household Survey

Alberta 

Introduction

This report presents select summary statistics for Alberta and its 87 Provincial Electoral Divisions (PEDs), and is based on the electoral boundaries as defined by the Alberta Electoral Divisions Act, Chapter E-4.2, 2010. A PED is a territorial unit represented by an elected Member to serve in the Alberta Provincial Legislative Assembly.

Data in this report have been specially tabulated from Statistics Canada's 2011 Census of Canada and the 2011 National Household Survey, by allocation of Statistics Canada block face reference points to PEDs. These data include the following characteristics: age, sex, household types, home language, Aboriginal identity, immigration status, dwelling characteristics, education, labour force activity and income. Saddle Lake 125 was incompletely enumerated in the 2011 Census and NHS. Data are not available for this area and thus are not included in the profile of PED 65 (Lac la Biche-St. Paul-Two Hills) or the province of Alberta.

The global non-response rate (GNR) for the Alberta is 27.4%, and varies between 17.4% to 43.0% for the individual PEDs. The GNR combines both complete non-response (household) and partial non-response (question) into a single rate. The GNR is an indicator of data quality, where a smaller GNR suggests more accuracy. When the GNR is 50% or above, the data are suppressed. A higher GNR indicates the need for user caution.

Users are advised to refer to the endnotes of this PED profile for further information regarding data quality and definitions. Thematic maps for this data can be found at the end of the document.

¹ Includes those who reported being an Aboriginal person and/or Registered Indian status and/or membership in a First Nation/Indian band.

² A family household contains at least one census family, i.e. a married or common-law couple with or without children or a lone-parent living with at least one child. A non-family household may be one person living alone, or two or more people who share a private dwelling but do not constitute a census family.

* Totals may not add to 100% due to random rounding.

¹ The after-tax low-income measure (LIM-AT) is not related to the low-income cut-offs (LICO) presented in the 2006 Census and prevalence rates are not comparable. Direct comparisons with low-income estimates from other surveys, administrative programs or previous censuses are not advisable. The prevalence rates observed in the 2011 NHS at the national level are about 1 to 2 pp higher than those for similar concepts in other programs. However, comparisons within the NHS for different geographic areas or demographic groups, as presented here, are valid.
